In thermodynamics, a critical point (or critical state) is the end point of a phase equilibrium curve. The most prominent example is the liquid-vapor critical point, the end point of the pressure-temperature curve that designates conditions under which a liquid and its vapor can coexist. At higher temperatures, the gas cannot

be liquefied by pressure alone.

### **Critical point (thermodynamics) - Wikipedia**

Properties Emissivity ( $\epsilon$ ) The emissivity of a given surface is the measure of its ability to emit radiation energy in comparison to a blackbody at the same temperature. The emissivity of a surface varies between zero and one. The emissivity of a real surface varies as a function of the surface temperature, the wavelength, and the direction of the emitted radiation.

### **Radiation properties - Wikipedia**

Fundamentals of Electric Circuits continues in the spirit of its successful previous editions, with the objective of presenting circuit analysis in a manner that is clearer, more interesting, and easier to understand than other, more traditional texts.
