Electromagnetism is a branch of physics involving the study of the electromagnetic force, a type of physical interaction that occurs between electrically charged particles. The electromagnetic force usually exhibits electromagnetic fields such as electric fields, magnetic fields, and light, and is one of the four fundamental interactions (commonly called forces) in nature.

These operators will "operate" on a wave function, Ψ , which is assumed to exist, and which is assumed to contain all that is knowable about the quantum mechanical system. We would then solve the resulting equation to get the particulars. And so, in this example, we can write the substitutions into the classical expression for total energy.

Intuitive Concepts in Quantum Mechanics - Scriptural Physics

Electrodynamics is the physics of electromagnetic radiation, and electromagnetism is the physical phenomenon associated with the theory of electrodynamics. Electric and magnetic fields obey the properties of superposition. Thus, a field due to any particular particle or time-varying electric or magnetic field contributes to the fields present in the same space due to other causes.

Ziemia oraz pozostałe planety Układu Słonecznego powstały 4,54 ± 0,05 mld lat temu z mgławicy słonecznej "obłoku gazu i pyłu, który podczas powstawania słońca przekształcił się w dysk. Z owego dysku miały powstać wszystkie planety oraz planetoidy. Najstarszy materiał, znaleziony w Układzie Słonecznym powstał 4,5672 ± 0,0006 mld lat temu.
