

### **hypergeometric distribution examples and pdf**

Definition 1: Under the same assumptions as for the binomial distribution, from a population of size  $m$  of which  $k$  are successes, a sample of size  $n$  is drawn. Let  $x$  be a random variable whose value is the number of successes in the sample. The probability density function (pdf) for  $x$ , called the hypergeometric distribution, is given by. Observations: Let  $p = k/m$ .

In mathematics, the Gaussian or ordinary hypergeometric function  ${}_2F_1(a,b;c;z)$  is a special function represented by the hypergeometric series, that includes many other special functions as specific or limiting cases. It is a solution of a second-order linear ordinary differential equation (ODE). Every second-order linear ODE with three regular singular points can be transformed into this ...

### **Hypergeometric function - Wikipedia**

In mathematics, a confluent hypergeometric function is a solution of a confluent hypergeometric equation, which is a degenerate form of a hypergeometric differential equation where two of the three regular singularities merge into an irregular singularity. (The term confluent refers to the merging of singular points of families of differential equations; confluere is Latin for "to flow together".)

### **Confluent hypergeometric function - Wikipedia**

This MATLAB function returns the probability density function (pdf) for the one-parameter distribution family specified by 'name' and the distribution parameter  $A$ , evaluated at the values in  $x$ .
