Perl 4 went through a series of maintenance releases, culminating in Perl 4.036 in 1993. At that point, Wall abandoned Perl 4 to begin work on Perl 5. Initial design of Perl 5 continued into 1994. The `perl5-porters` mailing list was established in May 1994 to coordinate work on porting Perl 5 to different platforms. It remains the primary forum for development, maintenance, and porting of Perl 5.

This tutorial will teach you how to access a database inside your Perl script. Starting from Perl 5 it has become very easy to write database applications using DBI module. DBI stands for Database Independent Interface for Perl which means DBI provides an abstraction layer between the Perl code and the underlying database, allowing you to switch database implementations really easily.

Synopsis. Our goal is to work through examples that demonstrate how to explore, process and manipulate genomic interval files (e.g., BED, VCF, BAM) with the `bedtools` software package.. Some of our analysis will be based upon the Maurano et al exploration of DnaseI hypersensitivity sites in hundreds of primary tissue types.

Making Music with ABC 2 I have written a manual that explains how to write music using ABC 2. It focuses on using abcm2ps, abc2svg, abcmidi, and the ABC/MusicXML translators, but most of the information it contains can be applied (at least to some extent) to all ABC applications. Many thanks to Norman Schmidt who helped me translate parts of the manual.

In computer programming, an application programming interface (API) is a set of subroutine definitions, communication protocols, and tools for building software. In general terms, it is a set of clearly defined methods of communication among various components. A good API makes it easier to develop a computer program by providing all the building blocks, which are then put together by the ...
