It's™ interesting to note that functional programming languages, like Scala or Erlang, forbid changing variable values.. In such languages, once the value is stored in the box, it's™ there forever. If we need to store something else, the language forces us to create a new box (declare a new variable).

Complexity characterises the behaviour of a system or model whose components interact in multiple ways and follow local rules, meaning there is no reasonable higher instruction to define the various possible interactions.. The term is generally used to characterize something with many parts where those parts interact with each other in multiple ways, culminating in a higher order of emergence ...
